

**ENGCOMP 0610: Tutorial on how to create a soundscape by mixing a created sound and adding music in the background.**

**Step 1:** Open Audacity

**Step 2:** Create a new project by selecting file and then new. You can also just type (command + N)

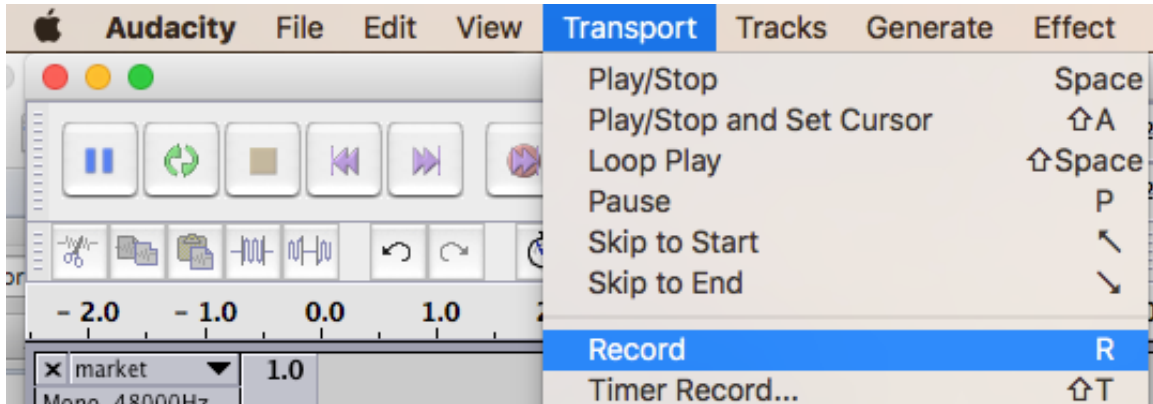

**Step 3:** Import the song you wanted in the back ground by selecting file-> import-> audio.

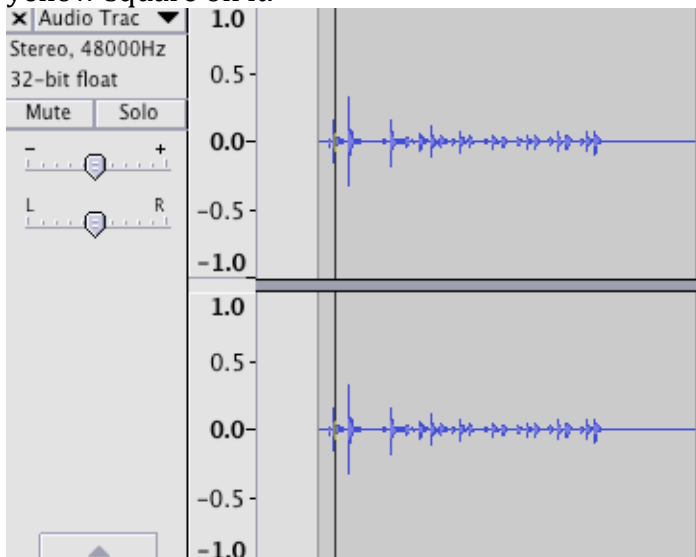

-you will be prompted to select the audio file from wherever you have the song saved.

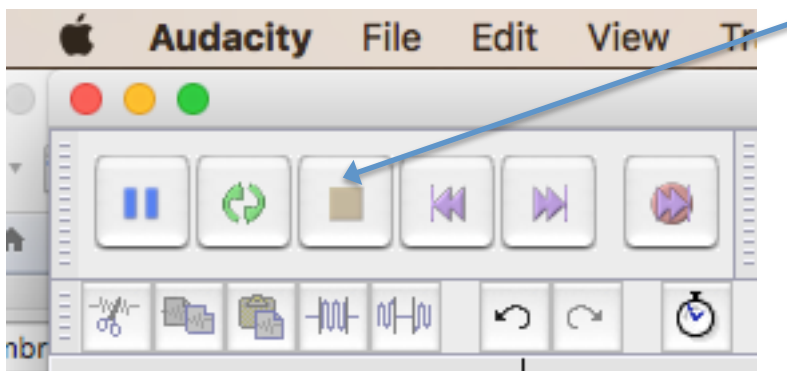

**Step 4:** Record the sound you want to make by selecting Transport->Record or by simply typing the letter R.

**Step 5:** Once you've selected record, you can start talking/ making noises and you will see audacity picking up the sound. When you are done press the button with a yellow square on it.

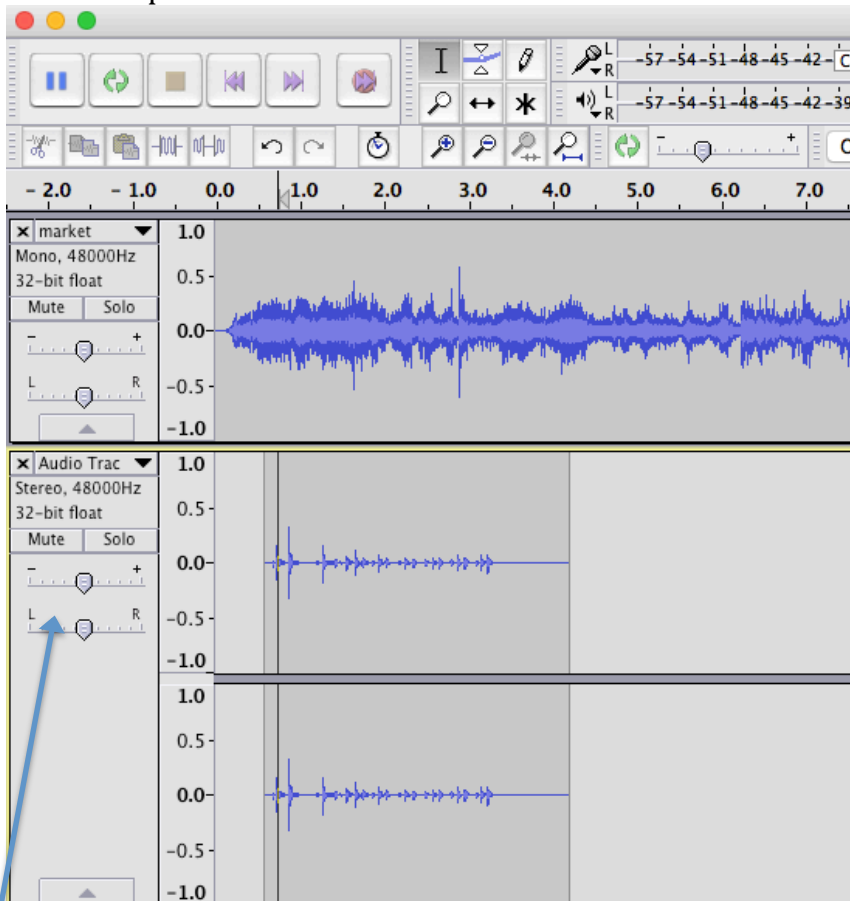

-Sound of a desk being knocked on.

Hit this button when finished recording.

**Step 6:** You can edit the sound by deleting pieces once the button with the yellow square had been hit. If you want to delete a certain section, highlight that section with the cursor and hit the backspace button.

Your final product should look like this:

If you want to change the volume of the sound, simply drag the cursor to the - or + side to change the sound effect:
